

LMark Documentation

By sam-astro

This is the documentation for *LMark*, written in *LMark*.

You can very easily write **Markdown** style text, which is compiled into \LaTeX to allow for extreme customizability, but maintaining the simplicity of **Markdown** to allow for very fast note-taking.

This is a line that contains inline code here: `print("Test!")`

this \rightarrow text should be underlined

This is a bullet point

Equation:

$$E^3 = mF + b$$

$$\sum E^3 = mF + b$$

$$\frac{x+5}{2+x^7}$$

<https://www.google.com>

These can be written in standard \LaTeX style, like so:

`$$E^3=mF+b$$`

`$$\sum\{E^3=mF+b\}`

`$$\frac{x+5}{2+x^7}$$`
